

## **Instruction for Submitting Algorithm-Processed Data**

If you would like to send data to Georgia DNR that has already been processed by the algorithm, please rename the “output4qc.txt” file to include state and date using this template:

“output4qc\_State\_YYMMDD”. For example, “output4qc\_GA\_180501”.

and email the file to:

zachariah.abouhamdan@dnr.ga.gov and brett.albanese@dnr.ga.gov.

We only need this one output file for mapping. We will use this data, along with data submitted by other states, to develop a range wide status map for the target species.

We strongly recommend that you run the latest version of the Algorithm (updated October 2018, version “status\_maps8.sql”) before submitting your data, to ensure full functionality of the range wide status map.

Please note that these same instructions are in the mapping tutorial document included with the Algorithm files (“NewStatusMap\_TutorialDocument\_v7”) on page 6.
